

# 10 interesting facts about planets

Planet Earth is also known as the "Blue Planet" because of the two-thirds of its surface is covered by saltwater oceans. It is the fifth-largest planet in the solar system with a radius of 3,959 miles. It is the only planet in our solar system with liquid water on the surface. Earth is the biggest of the four terrestrial planets i.e Mercury, Venus, Earth and Mars.

45 Interesting Facts about Planets for Kids. Mercury is the second densest planet in the solar system, after Earth, even though it is so small. Sunlight takes about 3.2 minutes to travel from the Sun to Mercury. Mercury is ...

The planets in our solar system are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. There are also dwarf planets such as Pluto, dozens of moons and millions of asteroids, comets and meteoroids of all shapes and sizes.

We're off on an adventure out of this world to discover ten stellar facts about space!. Facts about space. 1) One million Earths could fit inside the Sun - and the Sun is considered an average-size star. 2) For years it was believed that Earth was the only planet in our solar system with liquid water. More recently, NASA revealed its strongest evidence yet that there is intermittent ...

There are currently eight planets orbiting the Sun in our solar system. In the early years, scientists thought we had nine planets in our solar system, but that was not the case. 10. Light from the Sun will take about eight minutes to reach the Earth. That means when looking at the Sun, we see it as it was eight minutes ago..

We refer to the "solar system" as it has been named after our sun, called "sol" which is Latin for "sun." The words "Solar System" relate to two things: Any celestial body that is "of the Sun," and a collection of objects that work together to form the entire whole. Scientists believe that our solar system was formed around 4.5 billion years ago.

In this article, I'll explain some of the most interesting facts about planets in a way that is easy to read and understand. But first, let's try to get a clearer picture of what a planet is ...

45 Interesting Facts about Planets for Kids. Mercury is the second densest planet in the solar system, after Earth, even though it is so small. Sunlight takes about 3.2 minutes to travel from the Sun to Mercury. Mercury is bright and ...

10 Interesting Facts About Mercury Mercury. It is the smallest and closest planet to the Sun in the Solar System. Mercury is the closest planet to the Sun and the smallest since Pluto was downgraded to a dwarf planet. It is also one of five planets visible by the naked eye, along with Saturn, Jupiter, Mars, and Venus.

The first dwarf planets to be considered were Pluto, Ceres, and Eris. Makemake and the egg-shaped Haumea

# 10 interesting facts about planets

were later added to this category. These five are the officially recognized dwarf planets. However, there are still many objects like these that are awaiting confirmation and discovery. [More Interesting Solar System Facts](#)

**10 Interesting Facts About Neptune Planet** Neptune with its moon Triton and some other moons (3d space render, elements of this image are furnished by NASA) Neptune is named after the Roman god of the sea and is one of the fascinating planets in the Solar System. The planet was the last to be discovered as it was not visible to the naked eye.

Our Sun is also a star and is at the center of our solar system surrounded by planets, dwarf planets, moons, asteroids, gas, comets, and dust. To date, our Solar System contains: 1 star; 8 planets (Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune) 5 dwarf planets (Pluto, Ceres, Haumea, Makemake, and Eris) 181 moons; 566,000 ...

1. There are 8 solar system planets. The 8 planets of our solar system are divided into the inner planets Mercury, Venus, Earth, and Mars, and the outer planets Jupiter, Saturn, Uranus, and Neptune. The inner planets, so named because they orbit closest to the Sun, are solid balls of rock and metal, while the outer planets with orbits beyond the asteroid belt are ...

**Facts About Earth's formation, location, speed, composition, the existence of life.** 1. Earth is the third planet from the Sun and is the largest of the four terrestrial planets namely Mercury, Venus, Earth, and Mars (Order of the planets from the Sun: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto (the dwarf planet)). 2.

**10 Interesting Facts About Venus** A 3D rendering of the planet Venus. Venus is the second planet from the Sun after Mercury, the third brightest object in the sky after the Sun and Moon, and the closest planet to Earth. Venus is commonly referred to as "Earth's sister" since the two planets are similar in mass and size.

**Facts from Leo:** -70% of the Earth's surface is covered in water When astronauts first went into the space, they looked back at the Earth with human eyes for the first time, and called our home the Blue Planet. And it's no surprise. 70% of our planet is covered with oceans. The remaining 30% is the solid ground, rising above sea level.

The solar system was formed approximately 4.6 billion years ago by the collapse of a giant molecular cloud. The mass at its centre collected to form the Sun and a flat disk of dust around it. This eventually formed the planets and other bodies ...

Read on to learn interesting things about the planets. **Mercury Facts.** Mercury is the closest planet to the sun. It is named after the Roman messenger god because of its fast orbit around the sun. Mercury has a very thin atmosphere and no moons. It is one of the hottest planets in our solar system due to its proximity to the sun.

# 10 interesting facts about planets

Here are 24 out-of-this-world facts about the corner of space that's home to Earth, enough asteroids to keep Ben Affleck and Bruce Willis working for decades, and a football-shaped dwarf planet called Haumea, adapted from an episode of The List Show on . 1. Our solar system is a group of celestial bodies in the Milky Way galaxy.

Let's keep learning with our Top 10 Facts about Space and Top 10 Facts about the Solar System. Plus you can learn more about what's in our Solar System with our Top 10 Facts on the Sun and the Moon; the planets Earth, Mercury, Venus, Mars, Jupiter, Uranus and Neptune and the dwarf planet Pluto. Send us your favourite facts!

With eight planets and a wealth of smaller worlds to look at, there's more than enough to learn for a few lifetimes! So what are some of the most surprising things about the planets? We've highlighted a few things below. 1. Mercury is hot, but not too hot for ice The closest planet to the Sun does indeed have ice on its surface.

Here are 10 unexpected and intriguing facts about our solar system - our sun and its family of planets - you probably did not know! Sign Up for Our Amazing Newsletter! A daily update by email.

This article will explore the 10 most interesting facts about the planets that make them so fascinating. Firstly, we will delve into the planet closest to the sun, Mercury. Despite being the most minor planet in our solar system, Mercury has many unique features, including a day that lasts longer than its year and a surface covered in craters. ...

Jupiter holds the record for most moons with over 80. Zipping around the sun, Mercury is the fastest orbiting planet in our solar system. Titan, a moon of Saturn, boasts the strangest volcanic activity. 1. Jupiter is the largest planet in our solar system. 2. Venus has the longest rotation period of any planet. 3.

The information we have is not only vast, but it is not that recent. The planet was first discovered hundreds of years ago, although the exact circumstances of the first sighting are not exactly known. Thanks to advances in technology, our understanding has increased significantly. Learn more as thedailyECO shares 10 facts about the planet Uranus.

Zipping around the sun, Mercury is the fastest orbiting planet in our solar system. Titan, a moon of Saturn, boasts the strangest volcanic activity. 1. Jupiter is the largest planet in our solar system. 2. Venus has the longest rotation period of any planet. 3. Mars has the largest volcano in the solar system. 4.

The most decorated of all the planets, Saturn shines with beautiful power. Delve into its majesty and its secrets with these interesting Saturn facts. Toggle navigation. Top 10. Top 10; Animals; ... Adventure through our interesting Mars facts to discover more about what makes Mars so special. 50 Amazing Milky Way Facts. A luminous river of ...

# 10 interesting facts about planets

Facts about Mars. Mars and Earth have approximately the same landmass. Even though Mars has only 15% of the Earth's volume and just over 10% of the Earth's mass, around two thirds of the Earth's surface is covered in water. Martian surface gravity is only 37% of the Earth's (meaning you could leap nearly three times higher on Mars).

Planet facts for kids 1. All planets are shaped like a ball. One curious thing about all planets is that they are shaped like a ball or a marble. This is not a coincidence, and it happens because, at a certain size, all objects start to take a spherical shape.

Uranus' clouds are made up of hydrogen sulphide, meaning they have a very similar smell to rotten eggs. Gross. If we ever manage to travel to the gas planets, you might be in for a bit of a ...

Pluto was reclassified from a planet to a dwarf planet in 2006. This is when the IAU formalised the definition of a planet as "A planet is a celestial body that (a) is in orbit around the Sun, (b) has sufficient mass for its self-gravity to overcome rigid body forces so ...
