

18 amp hour lithium battery

Amp-hours (Ah) and watt-hours (Wh) are units that are often used to measure battery capacity. The ampere-hour capacity of a battery, expressed as Ah or A·h, describes the duration for which a battery can supply one ampere of current and the maximum amount of current it can supply for one hour. The watt-hour capacity of a battery, expressed as ...

What are Battery Amp Hours (Ah)? Amp Hours, abbreviated as Ah, is a unit of measurement used to describe the energy storage capacity of a battery. It represents the amount of energy a battery can deliver over a specific period. For instance, a 10Ah battery can deliver 1 amp of current for 10 hours, 2 amps for 5 hours, and so on.

Many readers may be confused by the various terminology associated with the batteries used in cordless electric tools, whether they might be for lawn and garden or other applications. Often when researching and selecting products, people will come upon the term amp hours, abbreviated as Ah. This can be confusing and intimidating.

An 18 Ah battery can produce a current which, when multiplied by the time (in hours) the battery can supply it, equals 18. So, an 18 Ah battery can provide, let's say, 1 amp for 18 hours, or perhaps 2 amps for 9 hours, or 3 amps for 6 hours, or 0.5 amps for 36 hours. In comparing batteries, it's useful to talk about loads described as "C",.

Ah, Ampere Hour or Amp Hour all describe the same characteristic of a battery - how long it will last when connected to the item it is powering. This is often referred to as the "capacity" of a battery. The measurement is often misunderstood as, for example, "a 5Ah battery will power a 5 amp device for one hour". This is wrong.
