

Battery energy storage system advantages and disadvantages

Batteries can be used to store some of the electricity which would otherwise be exported to the grid for use later in the evening when demand is higher and solar generation low. Domestic battery storage is a relatively new technology which is rapidly evolving.

There seems to be a consensus that commercial and industrial uptake of battery storage will be within the next 2-4 years, so it is still "on the cusp" of achieving wide success. Grid-scale deployment of battery storage is held back by uncertainty, high costs and other interrelated regulatory and commercial barriers.
