Abstract: As power markets and the generation mix continue to evolve in the United States and elsewhere, the need for flexible power systems increases. To achieve power system flexibility, developers of new power projects and owners of existing projects have increased their use of battery energy storage systems (BESSs) as a cost-effective option. Until recently,...

In 2018, an Energy Storage Plan was structured by EDF, based on three objectives: development of centralised energy storage, distributed energy storage, and off-grid solutions. Overall, EDF will invest in 10 GW of storage capacity in the world by 2035. Given the growing importance of stationary storage in electrical power systems, this white paper
