What is a solar feed-in tariff? A feed-in tariff (FiT) is a small credit rebate that households receive for any excess electricity produced by a solar system or other small-scale generator. Simply put, unless you have a solar battery, any solar power produced by solar panels must be immediately used or it will feed into the shared electricity grid for other properties to use.

As you may have heard there are two types of feed in tariffs: Net and Gross. Net feed in tariff - A net feed-in tariff pays you only for the surplus energy that you feed back into the grid. This type of scheme operates virtually everywhere in Australia now.
