Installing a storage solution like the EverVolt or EverVolt 2.0 with a solar energy system allows you to maintain a sustained power supply during both day and night, as long as you store enough power from your solar panels when the sun is shining.

To truly increase your grid independence and your electric bill savings, you'll want to pair your battery system with a solar power system. Here's how it works: Your solar panels generate direct current (DC) electricity from the sun's energy.

Below, we walk you through how energy storage systems work with solar and what that means for what you can expect to get from your storage system. We also take a more technical look at what's happening inside your battery to store that energy.

Final verdict: Both standalone storage and solar-plus-storage can help you save on electricity bills with demand charges or TOU rates, but solar-plus-storage should save you more on TOU rates. Find the right solar-plus-storage system on EnergySage

While there are three well-established ways to pay for a solar panel system-cash, loan, or a lease/power purchase agreement-the solar & storage industry is still figuring out the best way to help homeowners pay for storage.

Whether partial or whole-home, battery backup systems insulate you from disruptions caused by power outages, effectively boosting your home's resiliency. Pairing your solar panels with a battery backup system provides you with renewable resilience.
