Producing beer is a resource- and energy-intensive process. Given the number of craft breweries that have expressed an interest in sustainability, it should come as no surprise that breweries around the country are now looking for ways to produce brews in a more environmentally friendly way: by going solar.

That includes the biggest solar-beer deals ever recorded. In June 2019, Anheuser-Busch InBev closed a PPA with American solar company Recurrent Energy for the purchase of 222 MW worth of solar power. They will (virtually) be drawing power from the 250 MW Maplewood solar PV facility in Texas, once it's completed and generating electricity by 2021.

Once they awoke to the powerful combo of solar and beer, things started moving fast. One of the first major breweries to get into solar - and to this date still the leading solar beer brewer - was iconic Dutch beer maker Heineken.

With the installation of 9,212 solar panels at Zoeterwoude, Sol is making a step-change towards more sustainable brewing and another achievement in Heineken's Brewing a Better World sustainable development strategy. To mark this achievement, Sol unveiled a new sustainability approach on its packaging, Brewed with Solar Energy.

Brewed with Solar Energy is a great way to reinforce our authentic, longstanding connection to the sun, while taking care of the planet and its people. It is our responsibility to conduct business in a way that can be a positive force for change and to provide people with a product that fits increasingly sustainable-minded preferences.
