

Big battery

In July 2023, BigBattery experienced a security breach as a result of unauthorized access by a third party now identified as "BatteryEVO". After a full investigation, the incident was traced to the owner of BatteryEVO (Xi Wang), operating out of a IT Asset Partners, Inc. battery recycling facility.

The battery was charging fine to 27v and discharging to 24v but i wanted to get more time out of my battery while traveling. (Using a generator at rest stops to help solar charge the battery) i talked to Ian Roux who sold the PIP 2424LV to me and we went over the settings. I set the battery cutoff to 23.5v but got an alarm so i moved it back to ...

Apr 25, 2021. #1. I finally received my five OWL MAX batteries! They were back-ordered for ~1.5 months and finally shipped, arriving this past Friday (day before yesterday), ~two weeks earlier than BigBattery had estimated, yay! I failed to apply the @Will Prowse referral discount code at first, and BigBattery was great: I emailed them shortly ...

Max Charge Current: 100A. or. SOK 12V 200ah (x2) (4800Wh) \$1030 (x2) = \$.43 cents per Wh. Max Discharge Current: 100A. Max Charge Current: 50A. My plan is to use a Victron 24/3000/70 which on the inverter side can output 2400 continuous watts with surges as high as 6000 watts.

2 is indicated if you just never get to absorption voltage but show charging all day. 3 is just another version of 2 preventing you from getting fully charged. 4 sometimes these things are flakey. A reset entailing: 1) disconnect solar, 2) disconnect battery, 3) connect battery, 4) connect solar can restore function.

Battery Evo, Big Battery and Tech Direct Club are all one and the same. Buyer beware. Recently I had a customer purchase a 120ah 48v (24v units in series). These supposedly have new A123 LFP cells in them with a 10 year warranty.

Messages. 20. Aug 20, 2022. #1. About a week ago I purchased a 48v 11.8kw lifepo4 condor elite battery from big battery company. With this battery I got a 3000 watt Growatt inverter. I connected everything following the instruction manual and it worked perfectly for about 5 hours and in the middle of the night the power shut off.

Feb 24, 2024. #1. Has anyone looked into the new Bigbattery Ethos stackable batteries? They look like an alternative to the EG4 PowerPro except the price per kWh is high. Bigbattery also resells their version of the PowerPro as the Rhino 2. I plan to mate these batteries with the Luxpower 12kw inverter (aka EG4 18kw); approx 30 kWh battery ...

Dec 10, 2020. #1. I am building a cabin in the mountains and decided to go solar. I checked many videos on the web and went with MPP Solar 24v (LV2424-MSD) system with a bigbattery A123 24V. I got the MPP unit, solar panels, and wiring in. I ordered the battery back on 11-11-20 and just got it in 12-8-20. I got it out

Big battery

of the box and dead on ...

The new a 0% SOC = 3.2 and a 100% SOC = 3.65. So, if you have these batteries, your max bulk charge setting should not exceed 57.6v for a 48v battery and float should be 56. And the really cool thing I learned is that they self balance. Simply run the battery down to 0% SOC and then charge it back to 100%.
