An example of an electric power system is the network that supplies a region's homes and industry with power--for sizeable regions, this power system is known as the grid and can be broadly divided into the generators that supply the power, the transmission system that carries the power from the generating centres to the load centres and the ...

device which taps electrical energy from the electric power system is called a load on the system. The load may be resistive (e.g., electric lamp), inductive (e.g., induction motor), capacitive or some combination of them. The various types of loads on the power system are : Domestic load.

No headers. Covers the basics of computer hardware, software, and networking and helps students develop basic skills in using Windows and Microsoft Office, and creating web pages.

The power system model consists of scaled down components of three phase generators, transformers,

transmission lines and loads. The SCADA modules consist essentially of hardware for measurement monitoring, control and protection of the power systems.

system software to function. System software integrates the computer's hardware components and provides tools for day-to-day maintenance tasks, such as displaying a list of the files contained on a disk. MS-DOS, UNIX, Microsoft Windows 98 and System 7 are well-known examples of system software. (c) Application software: It turns the ...

It can be an instruction or commands given to computers to perform certain task and this usually comes from the manufacturer e.g. system software and application software and computer virus. Application software: - These are programs designed by skilled application programmers to meet the need of the users.

Information stored on computer hardware is often called software. The hardware components of a computer system are the electronic and mechanical parts. The software components of a computer system are the data and the computer programs. Click Here to see the desktop system these notes were originally prepared on. (This

Introduction to Computer Applications Notes - Free download as PDF File (.pdf), Text File (.txt) or read online for free. This document provides an outline for a course on computer applications. The purpose is to equip learners with knowledge of computer systems and software applications. By the end of the course, students should be able to define computer terms, understand hardware ...

Hardware refers to the physical components of a computer. Software refers to the programs or instructions that run on the physical computer. - We can entirely change the software on a computer, without changing the hardware and it will transform how the computer works. I can take an Apple MacBook for

system primarily comprises a central processing unit (CPU), memory, input/output devices and storage devices. All these components function together as a single unit to deliver the desired output. A computer system comes in various forms and ...

Power (unidirectional) flows from Power Systems through SCADA to EMS. Information flow (bi directional) SCADA forms the interface between Power Systems and EMS. The power system data, both continuous and discrete, is collected by SCADA and selectively sent to the EMS. EMS is a computerized control of power systems consisting of several application

condition in a power system. The steady state operating mode of a power system is balanced 3-phase a.c. .However, due to sudden external or internal changes in the system, such as a conducting object comes into contact with a live point, a short circuit which involves only one or two phases hence referred to as unsymmetrical faults.

A computer System is defined as a set of interacting elements, responding to inputs so as to produce outputs. The computer system also consists of the following elements. v Hardware v C.P.U (Central Processing Unit) v Input Devices v Output Devices v Storage Devices v Software v System Software v Application Software

These Power System (PS) Study notes will help you to get conceptual deeply knowledge about it. We are here to provide you the Best Study Notes from Best coachings like Made easy, ACE academy etc.. and Lecture notes from best institutions like MIT (Open Course), IIT (NPTEL) and TuDelft Open Course, Idaho, Illinois, ETH Zurich, UNSW, Philadelphia, DTU, Texas A& M, ...
