Standby generators are sized by kilowatts (kW), which is a unit of power. One kilowatt equals 1,000 watts. Therefore, a 22kW generator produces 22 kilowatts--or 22,000 watts--of electrical power. Each generator must also be matched to an automatic transfer switch (ATS), which serves as the brains of the standby-power system.

I've called a few local RV service shops and none have the answer. They say they are researching but no responses so far. I thought I'd check here. Anyone have any idea what inverter/charger I can get that will be compatible with my current set up? I currently have a Dimensions Unlimited standby power system. WIN-12x20B3RT.

I found it in both my owners manuals: The original WIN=12X20B3RT dated September 2003 on the Specifications page 6 and WIN12X20B3R1T, dated January 2007 on the specifications page 4. The reason I have two manuals is because I had to have my Dimensions rebuilt in January of 2008 and in the rebuilding they upgraded it to the later model which ...

I appear to be having trouble with my Dimensions WIN 12x20b3rt converter inverter charger. Today I had lots of stuff on in the RV and smelled this burning electrical smell... you know, the kind that leads to immediate panic. Anyway a glance at my Display showed "Inverter overload" and my battery bank sitting at 14.60 volts.

The Dimensions inverter is still not charging the batteries, but I now have 12V lights, etc. until they run down. Got my charger at the ready. Waiting for repairman to evaluate before replacing the Dimensions. Re your Xantrex 2000, does it fully replace all the functions of the Dimensions? Thanks again. _____

1.2 Standby Power System Precautions: o Standby Power Systems produce hazardous voltages. To avoid risk of harm or fire, the unit must be properly installed. o There are no user serviceable parts inside, do not remove the cover. o The Standby Power Systems should not be mounted in a location that may be exposed to rain or spray.

- Dimension 12x20B3RT Inverter/Charger Problem: ... ** Remember, L1 power (120V) out of the Main Power Panel is fed to the Dimensions Inverter internal transfer switch; and when it does not sense 120V-in then the Inverter is supposed to automatically turn on and produce 120V out of your 12V battery bank; and then it sends this power to the 30A ...

As for the one that goes to the dash switch, it"s probably one that goes to a large solenoid, that is controlled by the dash switch. When the switch is thrown to the "off" position, that intern shuts down the 12V house power, through that solenoid. And, by the way, when that 12V house power is shut down, so is your charging to the house batteries.
