These solid carbon-rich materials are often described as various types of coal, with different energy contents. The lowest energy content form is called peat, followed by lignite (brown coal), subbituminous coal, bituminous coal, and then hard coal, or anthracite. Their approximate specific energy contents are shown in Fig. 1.

Energy Storage Robert Huggins,2010-08-12 Introduction Energy is necessary for a number of reasons, the most basic and obvious involve the preparation of food and the provision of heat to make life comfortable, or at least, bearable.

Traditional and emerging battery systems are explained, including lithium, flow and liquid batteries. Energy Storage provides a comprehensive overview of the concepts, principles and ...

Energy Storage: Fundamentals, Materials and Applications 2015 by Robert Huggins &quot;Energy Storage: Fundamentals, Materials and Applications&quot; delves into the foundational scientific and engineering principles underpinning various energy storage methodologies. ...
