The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.

The Journal of Energy Storage focusses on all aspects of energy storage, in particular systems integration, electric grid integration, modelling and analysis, novel energy storage technologies, sizing and management strategies, business models for operation of storage systems and energy storage developments worldwide.

The case study considers two energy storage technologies, namely Li-ion battery and Solid Oxide Reversible (or Regenerative) Fuel Cell (SOFC-RFC). The former is a mature technology (Comello & Reichelstein, 2019), while the latter is an emerging technology for large-scale electric energy storage (Wei et al., 2020). ESSs based on both ...

Energy storage can be sited at three different levels: behind the meter, at the distribution level, or at the transmission level. Energy storage deployed at all levels on the electricity system can add value to the grid.

Two concepts of scaled micro-flywheel-energy-storage systems (FESSs): a flat disk-shaped and a thin ring-shaped (outer diameter equal to height) flywheel rotors were examined in this study, focusing on material

selection, energy content, losses due to air friction and motor loss. For the disk-shape micro-FESS, isotropic materials like titanium, aluminum, steel and wolfram ...

This project studied the value of long duration energy storage (LDES) to support decarbonization at three geographic levels: (a) meeting Senate Bill 100 (De Len, Chapter ... local capacity and criteria air pollutant reductions in a Los Angeles Basin case study, and (c) support microgrids for customer resilience. This study found that LDES could ...

In response to increased State goals and targets to reduce greenhouse gas (GHG) emissions, meet air quality standards, and achieve a carbon free grid, the California Public Utilities Commission (CPUC), with authorization from the California Legislature, continues to evaluate options to achieve these goals and targets through several means including through ...

The purpose of this work is to provide a state-of-the-art of the thermochemical heat storage solutions, focusing on temperatures comprised between 573 K and 1273 K.
