

# History of solar panels

1963 - Mass production of solar panels. Sharp Corporation, a Japanese electronics company, produced a viable PV module of silicon solar cells, which led to the successful mass production of solar panels. Japan installed a 242-watt PV array on ...

Solar technology isn't new. Its history spans from the 7th Century B.C. to today. We started out concentrating the sun's heat with glass and mirrors to light fires. Today, we have everything from solar-powered buildings to solar-powered vehicles.

It all began with Edmond Becquerel, a young physicist working in France, who in 1839 observed and discovered the photovoltaic effect -- a process that produces a voltage or electric current when...

With the way the cost of solar has plummeted in the past decade, it's easy to forget that going solar had a completely different meaning even just 15 years ago. Let's go back a few centuries to the origins of solar PV and explore the history ...

The first use of solar panels on houses traces back to 1973 with the creation of Solar One, a fully solar-powered building in Delaware. When did solar panels start getting popular? Solar panels started gaining popularity in the 1980s, stimulated by federal acts that provided incentives and tax credits for renewable energy installation in homes.

The U.S. Naval Research Laboratory launched Vanguard I, the first spacecraft to use solar panels, in 1958, [8] and NASA launched the first satellite equipped with panels that tracked the Sun, Nimbus I, in 1964. [9] The U.S. government ...

Before the first modern solar panels were invented by Bell Laboratories in 1954, the history of solar energy was one of fits and starts, driven by individual inventors and scientists.

These discoveries about the properties of light and conductivity have made solar power what it is today. To help you better understand how solar cells came to be, we've provided a timeline of the discoveries and inventions that led to their creation.

From the earliest days of solar-powered satellites to modern rooftop arrays and utility-scale solar farms, this is the complete history of solar energy--and a look at its exciting potential in the years to come.

History. In 1839, the ability of some materials to create an electrical charge from light exposure was first observed by the French physicist Edmond Becquerel. [1] . Though these initial solar panels were too inefficient for even simple electric devices, they were used as an instrument to measure light. [2]
