The District's Sustainable DC initiative establishes goals and targets for responding to climate change. Additionally, the Clean Energy DC (CEDC) Omnibus Act of 2018, raised the ...

I'm trying to get a feel for how much a typical installer or lead(w/ no electrical license) makes at a solar company in a large city in the USA. The company I'm currently at is just now getting started in Denver, Colorado and is struggling to find installers. They are wanting to pay 16-20hr, which I think is too low.

Solar leases are a solar financing option that allows homeowners to use solar electricity without having to pay the upfront cost of installation. Instead, a homeowner makes a monthly lease payment to the solar company in exchange for the solar energy. The solar panels reduce your electricity bill, and the lease payment is designed to be lower than your pre-solar electric bill.

In October 2009, a new law authorized the Dept of Consumer Protection to issue a solar thermal work "certificate" to any person who holds a Plumbing & Piping License (P-1, P-2, P-3, P-4), or Heating, Piping & Cooling License (S-1, S-2, S-3, S-4) license (issued by the Department) as long as that person has also completed an approved solar ...

Solar licensing and permitting typically take around 4-6 weeks. Because the process is so complex with multiple parties included and needed for approval, it can sometimes take longer for people who are unfamiliar with the process. The solar licensing and permitting process takes a significant amount of time due to several reasons.

Contractors cannot install a solar system without a C-10 license, as per the California state licensing board's decision. Only those holding a General A and/or General B license may continue to install solar and storage systems, but only if the work falls within the legal classifications of those two licenses. An act of the state legislature is required to modify those licenses.

Direct pay allows cities like San Antonio and other tax-exempt entities to take advantage of tax credits to reduce upfront project costs, something that was not possible ...

Additionally, solar farms typically cost between \$0.89 to \$1.01 per watt to install, and a 1 MW farm can earn roughly \$43,500 a year by selling its electricity to utilities .
