

For investigating inkjet-printed solar cells on 2D and 3D objects, the functional layers of the organic photovoltaic (OPV) layer stack were inkjet-printed either onto glass/ITO substrates or onto pure glass substrates. In the latter case, the bottom electrode was provided by inkjet-printing a ...

3.1 Inkjet-Printed Nickel Oxide Hole-Transport-Layer. Several solution-based deposition methods for inkjet printing of NiO x layers have been reported for non-PV applications as p-type semiconductor [66-69] and as HTL in thin-film PV [36, 37, 70] either on the basis of NiO x nanoparticles dispersions [37, 66, 67] or on basis of precursor ...

The main part of this chapter describes the most significant achievements in the field and remaining challenges for inkjet fabrication of active layers, electron- as well as hole ...

The material library for inkjet-printed electrocatalysts with optimum compositions is not only limited to OER 162 and HER applications but also extends to oxygen reduction reactions, which is a critical reaction step for fuel cells and metal-air batteries. 163 Functional nanoparticle inks (Ag, ZnO, and WO 3) have also been formulated for inkjet ...

The generation of electrical energy depending on renewable sources is rapidly growing and gaining serious attention due to its green sustainability. With fewer adverse impacts on the environment, the sun is considered as a nearly infinite source of renewable energy in the production of electrical energy using photovoltaic devices. On the other end, organic ...

Ciocca, M., Giannakou, P., Mariani, P. et al. Colour-sensitive conjugated polymer inkjet-printed pixelated artificial retina model studied via a bio-hybrid photovoltaic device.

The impact of a single droplet on the solid and smooth substrate for the inkjet printing 17.(a) Side-view of impact process of neutral and charged droplets on mirror-like ITO glass. (b) Neutral droplet and (c) ... Cross-section view SEM image of an all electrospray printed photovoltaic device. (f) J-V curves of the champion cell of the all ...

Noncontact inkjet printing offers rapid and digital deposition combined with excellent control over the layer formation for printed perovskite solar cells. In this work, inkjet printing is used to ...

Inkjet printed cells are compared to those obtained from the standard screen-printing route. As a proof of principle, photovoltaic cells with an area of 1.5 cm² and a performance of 9.1% were realized by inkjet printing, which ...

Using a stable and viscosity-tunable perovskite ink, a hybrid perovskite thin-film photovoltaic device can be deposited by the screen-printing method, which exhibits higher efficiency compared ...

In this work we compare two different semitransparent inkjet printed electrodes for organic photovoltaic (OPV) applications. We highlight the processing as well as layer properties of the most commonly used silver grid/PEDOT:PSS electrodes and a newly developed inkjet printed silver nanowire (AgNW) mesh. Application of the different electrode types in fully inkjet printed ...

inkjet head with a motorized xyz stage, a fiducial camera for the substrate alignment and a drop watcher camera to control the drop shape. The photoactive layer consists of P3HT blended with fullerene PCBM in a 1:1 weight ratio were dissolved in Tetralene and oDCB/ mesitylene solvent mixtures. On top of the active layer, an additional CaAg top electrode was ...

In recent years, organic solar cells became more attractive due to their flexible power devices and the potential for low-cost manufacturing. Inkjet printing is a very potential manufacturing technique of organic solar cells because of its low material usage, flexibility, and large area formation. In this paper, we presented an overall review on the inkjet printing ...

In 2021, Kiaee et al. for the first time reported the implementation of inkjet printing technology to poly-Si passivating contacts using a phosphorus dopant source [17]. Through optimization of the printing process, they achieved outstanding passivation quality on n-type poly-Si, yielding an implied open-circuit voltage (iV_{oc}) of 733 mV and an implied fill factor (iFF) of ...

Fig. 6.13 compares photovoltaic fingers that are screen printed with nanoparticle silver paste (left) [97] and inkjet printed with reactive silver ink (right) [93]. ... Particle-less reactive inks ...

DOI: 10.1021/ACSAEM.8B01829 Corpus ID: 139484832; Design and Color Flexibility for Inkjet-Printed Perovskite Photovoltaics @article{Schlisske2018DesignAC, title={Design and Color Flexibility for Inkjet-Printed Perovskite Photovoltaics}, author={Stefan Schlisske and Florian Mathies and Dmitry Busko and Noah Strobel and Tobias R{"o}dlmeier ...

As a proof of principle, photovoltaic cells with an area of 1.5 cm²; and a performance of 9.1 % were realized by inkjet printing, which opens up intriguing application possibilities.

Highly Efficient Inkjet-Printed Organic Photovoltaic Cells Jaewook Jung 1; 2, Donghwan Kim, Jongsun Lim, Changjin Lee 1, and Sung Cheol Yoon 1Advanced Materials Division, KRICT (Korea Research Institute of Chemical Technology), Daejeon 305-600, Republic of Korea 2Department of Materials Science and Engineering, Korea University, Seoul 136-701, Republic ...

In this study, we made inkjet-printed blends of P3HT with various fullerene acceptors, [60]PCBM, -phenyl-C 71-butyric acid methyl ester ([70]PCBM), and bis(1-[3- ... In printed photovoltaics, the solvent composition has a key role to achieve an intimate morphology within the blend, to provide the proper spreading and wetting of the printed ...

In terms of device architectures, printing on mesoscopic metal oxide selective contact layers may prove beneficial for fully printed and low-cost photovoltaics. Table 1 shows ...

Perovskite Film Formation during the IJP Process. To construct commercialized inkjet-printed perovskite optoelectronics, the formation of a high-quality perovskite active layer on a large scale is critical to fill the performance gap between laboratory-scale devices and scalable devices for commercialization. 38 This is the prerequisite and core of the future perovskite ...

Inkjet printing of metal halide perovskites is a promising production technology for many optoelectronic devices. The printing process is highly flexible, digital, mask-less direct writing technique,...

With a vast number of available substrates and inks, inkjet printing allows access to the fabrication of lightweight, flexible, low-power electronic devices for a broad range of applications. From transistors to quantum dot displays to photovoltaics, inkjet printing is an exciting field of device fabrication and shows great promise.

Inkjet printing (IJP) is a versatile method for fabricating functional layers from homogeneous and colloidal inks [1]. This technology is exploited in the semiconductor industry to fabricate organic transistors [2], light-emitting diodes (LEDs) [3], photovoltaics [4], displays [5], other optoelectronic devices [6] addition, the IJP technique has been used to print other ...

Using silver nanowire meshes as bottom and top electrodes, a fully inkjet printed semitransparent organic solar cell with a power conversion efficiency of 4.3% for 1 cm² area is demonstrated, which is the highest value reported so far ...

Abstract Inkjet-printing is considered an emerging manufacturing process for developing perovskite solar cells (PSCs) with low material wastes and high production throughput. ... solvents and/or high-molarity perovskite precursor inks that are known to enable the development of high-efficiency photovoltaics (PVs). The present study provides a ...

Advances in Inkjet-Printed Metal Halide Perovskite Photovoltaic and Optoelectronic Devices Florian Mathies,* Emil J. W. List-Kratochvil, and Eva L. Unger Inkjet printing (IJP) has evolved over the past 30 years into a reliable, versatile, and cost-effective industrial production technology in many areas from graphics to printed electronic ...

PDF | On Sep 26, 2016, Philipp Maisch and others published Inkjet printing of semitransparent electrodes for photovoltaic applications | Find, read and cite all the research you need on ResearchGate
