The ideal voltage for a lithium-ion battery depends on its state of charge and specific chemistry. For a typical lithium-ion cell, the ideal voltage when fully charged is about 4.2V. During use, the ideal operating voltage is usually between 3.6V and 3.7V.

current drain (i.e. 25mA) to a cutoff voltage (i.e. 0.8 volts). The time (hours) it takes the battery to reach the cutoff voltage is then multiplied by the current drain to establish the mAh capacity of the battery. 8. Does the mAh capacity of a battery change with the drain rate? A battery is much more efficient at using its fuel at lower current

AA batteries also come in different chemical makeup, with lithium non-rechargeable batteries with 3 volts and the rechargeable lithium-ion batteries, which have a voltage of 3.6V. Furthermore, there are Nickel-metal hydrides and nickel-cadmium AAs, both 3.6 and 1.2 volts, likewise rechargeable.

The electronic devices that these batteries can operate efficiently should be between 0.9 and 1.5 volts. A device with a higher required voltage will not function efficiently. Rechargeable AA batteries have slightly lower voltage ratings, especially since they can be reused over a specific timeframe.

Voltage of Lithium AA Battery. Both batteries have a nominal voltage of 1.5 volts. However the lithium chemistry performs much, much better under load. Note the apparent open-circuit (no load) voltage of the AA lithium. It's approximately 1.7 volts. HOWEVER, before you get all worried about that (being more than 1.5 volts)...

A standard AA lithium (non-ion) battery, on the other hand, is not intended to be rechargeable in the first place. Instead, what pure lithium chemistry offers in AA format is an especially powerful and very long-lasting cell type. ... 1.5V, the standard nominal voltage for batteries of this size (AA 1.5V batteries are the most common and widely ...

The dimensions and voltage of an AA battery are critical factors to consider before use, as incorrect battery size or voltage can lead to inefficient operation or even damage electronic devices. Typically, the voltage of AA batteries ranges between 1.2 and 1.5 volts.
