Yes, I know. There's either more or less than nine planets. For puposes of my collage above, the &quot;dwarf planet&quot; debate is moot: we're not going to have detailed photos of Eris or Pluto's other siblings any time soon. I'll add Ceres when the spacecraft currently orbiting it gets around to sending color photos.

Neptune from Voyager 2. Image credit: NASA/JPL. Neptune is the eight planet of our Solar System, and the farthest from the Sun. Like Uranus, it is both a gas giant and ice giant, composed of a ...
