N2 - Technical concerns with integrating higher penetrations of photovoltaic (PV) systems include grid stability, voltage regulation, power quality (voltage rise, sags, flicker, and frequency fluctuations), and protection and coordination.

As PV deployment continues to increase, ongoing O& M of these systems is critical. However, various factors--such as evolving technologies, weather, and resources for maintenance--contribute to O& M. Optimizing the O& M of PV systems is vital to lowering the levelized cost of energy for solar energy.
