Chapters are written concisely in straightforward language that provides clear explanations of the concepts and principles, with an emphasis on humanitarian applications of photovoltaic systems and a focus on relatively small size systems that will make the book relatable to readers.

Interest in PV systems is increasing and the installation of large PV systems or large groups of PV systems that are interactive with the utility grid is accelerating, so the compatibility of higher levels of distributed generation needs to be ensured and the grid infrastructure protected.

larger systems and off-grid battery installations. Mechanical design of the PV array is not within the scope of this document. BRE digest 489 "Wind loads on roof-based Photovoltaic systems", and BRE Digest 495 "Mechanical Installation of roof-mounted Photovoltaic systems", give guidance in this area. 1.2 Standards and Regulations

When Are PV Systems Appropriate? People select PV systems for a variety of reasons. Some common reasons for select-ing a PV system include: oCost--When the cost is high for extend-ing the utility power line or using another electricity-generating system in a remote location, a PV system is often the most cost-effective source of electricity.

Surface Area: The surface area of the site at which the PV installation is intended should be known, to have an estimation of the size and number of panels required to generate the required power output for the load. This also helps to plan the installation of inverter, converts, and battery banks.

The heart of a photovoltaic system is the solar module. Many photovoltaic cells are wired together by the manufacturer to produce a solar module. When installed at a site, solar modules are wired together in series to form strings. Strings of modules are connected in parallel to form an array.

7 | Design Guideline for Grid Connected PV Systems Prior to designing any Grid Connected PV system a designer shall visit the site and undertake/determine/obtain the following: 1. The reason why the client wants a grid connected PV system. 2. Discuss energy efficiency initiatives that could be implemented by the site owner. These could include: i.

This overview of solar photovoltaic systems will give the builder a basic understanding of:

- o Evaluating a building site for its solar potential
- o Common grid-connected PV system configurations and components
- o Considerations in selecting components
- o Considerations in design and installation of a PV system

It also includes chapters on sizing photovoltaic systems, analyzing sites and installing PV systems, as well as detailed appendices on PV system maintenance, troubleshooting and solar insolation data for over 300 sites around the world. Used worldwide as the textbook in SEI's PV Design & Installation workshops, topics covered include:

house in the outskirts of Copenhagen, Denmark. In order to correctly size the system two different simulation programs, HOMER and PVSUN3, will be used. With these programs a number of different solar PV and wind turbine arrays can be simulated in order to determine the cheapest and best system configuration.

- 10 2. Integrated or Grid-Tied System

Grid connected photovoltaic power system is an electricity generating system which is linked to the utility grid (energy.gov, n.d.). This photovoltaic system contains solar panel, inverter and the equipment to provide connection to the grid.

enhance the safety and system performance of the solar PV system installations by considering exemplary practices and innovative technologies identified at the time of preparation and revision of this Handbook.

This publication will introduce you to the basic design principles and components of PV systems. It will also help you discuss these systems knowledgeably with an equipment supplier or system installer.

There are other factors that will limit the size of your solar photovoltaic system some of the most common are roof space, budget, local financial incentives and local regulations. When you look at your roof space it is important to take into consideration obstructions such as chimneys, plumbing vents, skylights and surrounding trees.
