The rule of thumb when turning on any audio rig is to power up the sound-creating device last -- in most studios, this will be the power amp that drives the monitors or the monitors themselves, if they"re self-powered. With guitar, bass, and keyboard rigs, this will be the instrument amplifier live sound rigs, this will usually be the power amps that drive the mains ...

Amplifiers generate heat. Housing the amplifier circuitry and power supply in a separate device may be desired, rather than cramming it in the same cabinet as other receiver-type functions, especially when lots of amplifier output power is needed.; A separate preamp and power amp results in more equipment and cable clutter.
