LG will still be around in 25 years, that solar company could close up shop next year. Go with micro inverters, not a string inverter. They are more expensive, but the improved efficiency and ability to monitor production of each individual module will save money over time and help identify any potential issues within minutes.

When grid-tied solar panels make more energy than a customer needs, the excess is sent back to the electric grid along the same wires that carry power to the home when the sun is down.. Net metering is the utility billing practice of recording the excess energy generated by a solar installation and applying it to the customer's bill as credit toward energy drawn from the grid.

Is net metering worth it? Rooftop solar and net metering are worth the upfront cost in several ways. First, net metering allows for substantial electricity savings of the list of a solar system - often tens of thousands of dollars. Net metering has also been key in increasing rooftop solar adoption, which has contributed to:

If you lease the panels, they often take some of the tax incentives, and leave you with a lease that can be an issue if you sell your house. The best case is to find a reputable installer, and purchase your panels outright (or use a solar loan or HELOC). This ensures you keep all the tax incentives, and don't have any shady lease haunting you.

In December 2022, the California Public Utilities Commission (CPUC), the regulatory agency in charge of private utility companies in California, approved California's new net metering policy, NEM 3..
