

The focus of this work is on investigation of LabVIEW electric power tool in particular and LabVIEW software in general for the analysis and design of electric power systems. Here we are targeting the solution of different electrical engineering problems which we very often face in teaching the course of power system analysis.

Power system studies on an existing system have indicated that 2400 MW are to be transmitted for a distance of 400 Km. The voltage levels being considered include 345 kV, 500 kV, and 765 kV.

Learning Objectives To be able to perform analysis on power systems with regard to load flow, faults and system stability Outline Syllabus 1. Power Flow Analysis: (8 hrs) Analogue methods of power flow analysis: dc and ac network analysers Digital methods of analysis: Power Flow algorithms and flow charts, analysis using iterative techniques. 2 ...

MATLAB and SIMULINK, ideal for power system analysis, are integrated into the text, which enables students to confidently apply the analysis to the solution of large power systems with ease. In the third edition, Chapter 1 is revised comprehensively to include energy resources and their environmental impacts.

Power System Analysis Hadi Saadat, 2009-04-01 This is an introduction to power system analysis and design. The text contains fundamental concepts and modern topics with applications to real-world problems, and integrates MATLAB and SIMULINK throughout.
