The PV cell is made of semiconductor material, which conducts electricity better than an insulator but not quite as well as a good conductor like metal. PV cells are made up of a variety of semiconductor materials.

The efficiency of a PV cell is simply the quantity of electrical power produced by the cell in comparison to the energy emitted by the light shining on it, indicating how efficient the cell is at converting energy from one form to another.

TOP propozicziya! Sonyachna panel` pv MODUL` longi lr5-72hth-575m, 575wp, mono. Sonyachni fotomoduli longi, cze klyuchovij element v sonyachnix sistemax, shho peretvoryuye sonyachne viprominyuvannya v elektrichnu energiyu.
