

Residential solar power costs

For example, the cost of solar panels for a 2,500 square foot home would be \$28,750 before incentives and \$20,125 after the 30% tax credit. $2,500 \times \$11.50 = \$28,750$. While this method provides a quick-and-dirty estimate for the cost of solar panels, solar systems are sized based on electricity consumption -- not the size of your home.

Solar panels cost anywhere from \$3,500 to \$55,000, including professional labor and materials. Most homeowners pay an average of \$27,155 on their solar panel installation costs. However, solar panel prices depend on factors like the type of panel, its wattage, and the number of panels purchased.

Solar panel maintenance costs: Solar panels have no moving parts, so very little maintenance is required. However, getting routine professional solar panel cleaning and inspections every two years can keep your system in tip-top shape. These solar maintenance costs can be about \$300 per session.

For a cash purchase, your average monthly electric bill with solar panels is essentially flat fees that can't be offset by net metering and any leftover electricity bill (this mostly pertains to California). If you selected financing, the monthly payment represents your loan payment for a 20-year loan.

Solar panel installation costs a national average of \$16,500 for a 6kW solar panel system for a 1,500 square ft. home. The price per watt for solar panels can range from \$2.50 to \$3.50, and largely depends on the home's geographical area. Residential solar panels are usually sized at 3kW to 8kW and can cost anywhere from \$9,255 and \$28,000 in total installation costs.
