Cold Pool water is diverted through the Pool Solar Heating panels, that are mounted on the house roof, and preferably North facing. The water is returned back to the swimming pool 6-12°C warmer. The circulation process continues the entire day which in turn heats the swimming pool water to a more desirable temperature.

A solar pool heater uses panels to collect the sun's energy as well, but instead of having that current flow to a mechanism in your pool, the pool water is circulated through the solar collection area, ensuring a consistent warming effect. That water is then pumped back into the pool through a hose and a flow control valve.

Installing a solar pool heater for an above ground pool differs slightly from an inground pool. The solar panels can be installed on the ground, against the side of the pool, or anywhere else in your yard, as long as the return hose can be connected from the solar panel to the pool.
