A sine inverter takes the DC output of your solar array, converts it to AC, and does so in a way which replicates as closely as possible the pure sine wave of grid power alternating current. Moreover, pure sine wave inverters amplify the converted current to differing strengths of wattage and voltage.

Which is where pure sine wave inverters come in. Pure sine wave inverters are much more complex machines, with circuit boards which are designed not to chop or meddle with DC electricity, but to actually oscillate it until it forms an AC wave. At this point, the AC sine wave has been created, but is not yet fit for use.
