Solar panel installation process

Any open holes in your roof shingles will be sealed to prevent leaking. The installer will then install the solar panels to the racking and connect the electrical wiring. They"ll also install any additional equipment, such as an inverter or battery bank. Many solar installers can complete installation in just one day.

Securely mount solar panels on your chosen location using mounting racks. The type of rack will depend on whether the installation is on a roof or the ground. Ensure high-quality wiring and connectors to minimize energy loss. Your installer will design a wiring system that connects the panels to the inverter and then to your electrical panel.
