Hybrid solar inverters can operate in three different modes: grid-tie, off-grid, and hybrid. In grid-tie mode, the hybrid solar inverter is connected to the grid, allowing excess solar electricity to be fed back into the grid. This can allow homeowners and businesses to earn credits or even receive payment for the excess electricity produced.

Hybrid solar inverters will beat other products in the context of increasing demands for smart multi-source energy management and efficient distributed energy coordination. As the solar market is under ongoing evolution, the demand for hybrid inverter products is expected to grow continually.
