While some pest repellents are designed for both indoor and outdoor use, solar-powered units should be placed outdoors in order to harness the power of the sun. Ultrasonic vibrations are high frequencies (over 20,000 hertz) that are indiscernible to the human ear. Certain animals and insects are capable of picking up on these high-pitched sounds.

If you've worked hard to maintain a lush landscape or vibrant edible garden, the last thing you want is for burrowing animals to dig up the earth or munch on your produce. Solar pest repellents are safe, easy to install, inexpensive, and have low power requirements thanks to their sun-harnessing design.

The short answer to the question "do ultrasonic pest repellers work" is there is no credible scientific evidence that suggests ultrasonic pest repellers work. Additionally, in 2003, the Federal Trade Commission demanded that one of the chief marketers of ultrasonic repellents, Global Instruments, discontinue their advertising campaigns.
