Lithium-ion batteries can be recycled, but it's a more involved process and less common than recycling other materials like plastic or aluminum. Nonetheless, because of the valuable materials they contain and environmental concerns, recycling initiatives are increasing. Video related to Solid State Battery vs Lithium Ion

Of course, solid-state batteries have downsides of their own. The most prominent is their cost. Experts predict solid-state prices to fall between \$80 and \$90 per kilowatt-hour (kWh) by 2030, while conventional lithium-ion batteries could reach \$60 per kWh by the same time. Producing these more complex components at scale may also prove challenging.
