If the panels are within a foot of the edge, you can see them from the ground. If you can see solar panels on the roof, you are not fooling anyone. You might as well have the power you need rather than limiting it trying for stealth. We've not had any issues and our van is an obvious RV. We don't park where we would piss people off.

Solar is a great way to recharge a battery and keep equipment like fridges and fans running during the day. Here's a summary of what we've done to add solar charging to our van. Choosing panels Monocrystalline, Polycrystalline, flexible, rigid, wattages, voltages - there are a lot of variables when you are choosing a solar ... Continue reading "Solar panels and charger"

Test all your components before you mount the components on your van. Mark the location of your solar panels and mounting points to avoid having to measure again. Measure twice (even three times!), drill once. You probably need less power than you think. Don't forget to use the solar panel calculator for an accurate estimate of your energy needs.

This custom-built, all-season van takes off-grid luxury to new heights with two unique, first-of-their-kind features: an extending solar panel array providing an impressive 1,260 watts of power, and a concealed passenger-side module that slides forward to reveal a spacious 3'x4' recirculating shower with composting toilet.
