The Technology Behind the Tesla Solar Inverter. Tesla's solar inverter is a device that is meant to be paired with a solar energy system. Inverters take up the role of turning stored energy from solar panels into energy that you can use. What this means is turning DC energy into AC. AC is equivalent to the energy used by the grid.

Most modern solar inverters operate in the 100 to 550V range, with a maximum of 600V. The Powerwall 3 specifications show a 150V to 480V operating (MPPT) voltage range and a maximum of 600V. This would result in slightly fewer panels per string. The 480V upper MPPT limit is the same as the Tesla solar inverter, suggesting it uses the same MPPTs.
