Today s sky chart

hours, 2 minutes: Sunset: Oct 15 at 5:55 pm:

The night sky tonight looks different depending on the location. The constellation maps below show the sky at around 10 pm in the mid-northern, equatorial, and mid-southern latitudes. Northern hemisphere. For northern observers, the sky overhead is dominated by three bright asterisms.

The ZHR value refers to the Zenithal Hourly Rate, i.e. the average number of meteors an individual observer could see in an hour, assuming perfectly dark sky conditions. This number is an estimate, the number an observer could see in real conditions depends on the actual intensity of the shower (which can be highly variable) and on the sky conditions.

NOTE: values for the closest approach are computed with a sampling interval of 1 day. Light Curve.
