Global renewable energy capacity increased by 50% in 2023. At this pace, the COP28 target of tripling capacity by 2030 potentially seems attainable. However, sustainable energy systems are about much more than just capacity - energy must reach the right people, at the right time, and the variability of renewable sources and peak demands make this a critical ...

The Department of Energy's (DOE) Office of Electricity (OE) held the Frontiers in Energy Storage: Next-Generation Artificial Intelligence (AI) Workshop, a hybrid event that brought together industry leaders, researchers, ...

"This storage project represents a critical transitional component for the diverse energy portfolio needed in ERCOT," said Pat Eilers, Founder and Managing Partner of TEP. "As an investor focused on midstream energy ...

Compressed air energy storage systems may be efficient in storing unused energy, but large-scale applications have greater heat losses because the compression of air creates heat, meaning expansion is used to ensure the heat is removed [[46], [47]]. Expansion entails a change in the shape of the material due to a change in temperature.

CAES, a long-duration energy storage technology, is a key technology that can eliminate the intermittence and fluctuation in renewable energy systems used for generating electric power, which is expected to accelerate renewable energy penetration [7], [11], [12], [13], [14].The concept of CAES is derived from the gas-turbine cycle, in which the compressor ...

To reduce dependence on fossil fuels, the AA-CAES system has been proposed [9, 10].This system stores thermal energy generated during the compression process and utilizes it to heat air during expansion process [11].To optimize the utilization of heat produced by compressors, Sammy et al. [12] proposed a high-temperature hybrid CAES system.This ...

Energy system decarbonisation pathways rely, to a considerable extent, on electricity storage to mitigate the volatility of renewables and ensure high levels of flexibility to future power grids.
